No pertinent search in areas of Cl. 60 and Cl. 239 in A.U. 3746. Suggest contacting someone in area of Cl 239 in A.U. 3752.

Lou,

pls advise William (if you can, doesn't look like a propulsion item).

Thanks,

Ehud

I am examining a case which recites an extrusion nozzle having the following description:

"A method of employing an extrusion nozzle head for extruding sealant material from within a nozzle inlet channel to a recessed space at one end of an interior chamber of a nozzle outlet channel for extruding sealant material from a nozzle outlet opening to a U-shaped receiving channel of an insulated glass assembly...." The sealant material is extruded "from the nozzle inlet channel to the recessed space at one end of the interior chamber of the nozzle outlet channel to the nozzle outlet opening of the extrusion nozzle head by pressure applying means."

I am looking for a search/art related to the particular nozzle structure. The nozzle is illustrated as follows (the recessed portion is labeled 98):

 Untitled Attachment

Any suggestions?

Thanks!
